Summary		
I'm Nino Jelen from Slovenia – a passionate automation enthusiast with over 14 years of hands-on experience in the automotive industry. I began my career as an industrial electrician and have steadily advanced my skills in programming and automation systems. My interests range from robotics and PLC programming to software development and everything in between. I thrive on solving complex technical challenges, learning new technologies, and building smart, efficient systems that just work. Whether it's optimizing a production line or writing code to control machines, I'm driven by the excitement of turning ideas into real-world automation.
